

General

OCRE entered the Offshore Wind construction market in 2010 supplying qualified professionals and teams to a variety of international clients. OCRE contributes valuable cost and time saving solutions to offshore wind construction and engineering.

OCRE supplies professionals for the construction, commissioning and maintenance phases of Offshore Wind farms. Our teams are specialists in installing foundations, wind turbines and infrastructure (cables and converter platforms). We also recently started maintenance and repair services.

Knowledge

We gained experience in constructing exploration and production platforms, building heavy lift ships, laying pipelines/cables, dredging and building harbours. We use these assets for the offshore wind industry especially in the North Sea area. Most of the technical and SHEQ experience was gained by OCRE in this very demanding maritime environment.

High standard

OCRE provides cost-effective high quality solutions in changing markets, changing project configurations and changing planning schedules. We help our clients to achieve highest sustainable standard with respect to quality and safety.

Professionals

- QHSE professionals Offshore GWO
- QHSE management & Support
- Client representatives
- QC inspectors fabrication
- Engineers
- Heavy lift specialist
- Construction specialists
- Commissioning engineers
- Document controllers

Services

- Project staffing
- Executive search
- Consultancy
- Operations & Maintenance
- Engineering & Design
- QHSE
- QA/QC
- Project Management
- Heavy lifting
- Document control

OCRE has been/is involved in the construction of several wind farms in the North Sea. Several project teams of offshore professionals are operational using both in-house staff and external specialists. We anticipate a personnel shortage for the market and are training young professionals.

OCRE can make the difference. A project is depending on its professionals and its management. Prior to joining OCRE all specialists worked in the offshore industry, oil and gas, ship building and industrial services. We understand the demands and requirements of our customers and use this understanding in our selection and recruitment process and find the right individuals and teams if we not already employ them.

OCRE is NEN 4400-1 certified.

OCRE is partner of IND (ministry of security and justice), we employ highly skilled migrants.
